Colloids and Surfaces, 63 (1992) 354–355
Elsevier Science Publishers B.V., Amsterdam

Subject Index

Adhesion, 103
Adsorption, 29, 49, 67
Air–water interface, 241
Alcohols, 21
Alkali cations, 113
Aluminium(III), 259
Amphiphilic association structures, 269
Anionic sugar-based surfactants, 281
Antibody, 273
Antigen, 273
Aromatic compounds, 83
$AuCl_4^-$–cationic surfactant complex, 337

Binding sites, 67
Biochemical phosphates, 29

Capillary systems, 341
Catalysts, 59
Cationic surfactant, 337
Charge-transfer complexes, 83
Chelates, 291
Chloroform, 323
Colloidal silica, 113, 151
Competitive adsorption, 329
Concentrated fluorocarbon emulsions, 281
Conductivity, 219
Controlled pore size, 55
Copper(II) nitrate solubility, 269
Crude oil, 241
Crystal growth, 259
Cristobalite, 67

Degrees of freedom, 341
Diffuse reflectance, 21
Diffusion potential, 253
Dihexadecyl phosphate, 201
Disperse material, 253
Dispersion, 121

Electron microscopy, 151
Emulsions, 181, 269, 329
External interaction, 341

Faujasite, 77
Fibers, 139
Flocculation, 121

Fractal dimensions, 67
FT-IR spectroscopy, 11, 21, 97

Gas, 67
Gas separation, 173
Grouting, 189

Heptane/water interface, 201
Heterocoagulation, 103
Homogenization, 329
Hybrid materials, 131
Hydrazine, 337
Hydrophilization, 273
Hydrophobicity, 49
Hydrothermal treatment, 33, 97

Immobilization, 273
In-situ gelation, 189
In-situ polymerization, 189
Injectable oxygen carriers, 281
Inorganic membranes, 173
Inorganic polymers, 139
Interface, 235
Ion-exchange, 59
Ionization, 39
IR spectroscopy, 77
Iron(II), 259

Knudsen flow, 173

Lepidocrocite, 259
Liquid crystal solubilization, 269
Luminescence, 163
Luminescence probes, 83

Macromolecules, 131
Matrix plugging, 189
Metal ions, 291
Micelles, 291
Microemulsion, 273, 311
Microporous silica, 173
Mixed films, 241
Monodispersed colloidal gold, 337
Monolayers, 201, 235

Nanocomposite materials, 131
Nitrogen adsorption, 33

NMR spectroscopy, 77
Non-ionic surfactant–oleic acid interactions, 301
Non-ionic surfactant–phospholipid interactions, 301
Non-ionic surfactants, 49, 269, 311

Oil recovery, 189
Organolithic materials, 131
Orientation, 235
Oxidation, 21, 311
Oxidized aluminium, 1
Oxidized silicon, 1

Particle growth, 151
Particle size, 311
Particle size reduction, 281
Perfluoropolyether, 219
Phase-transition, 235
Phospholipid–oleic acid monolayers, 301
Platinum, 59
Point of zero charge, 253
Polymer, 241
Polymer adsorption, 121
Polymerization, 209
Polyvinyl alcohol, 209
Poly(ethylene glycol), 273
Polysaccharide, 273
Powder synthesis, 181
Preconcentration ultrafiltration, 291
Pressure–area isotherm, 241
Protecting colloid, 209
Proteins, 273, 329
Protonation, 83
Pyrene, 39

Quartz, 67
Quaternary ammonium salts, 323

Reduction, 337
Removal behaviour, 103

Samarium-doped silica, 163
Self-association, 323
Silanization, 1, 55
Silanol groups, 33
Silanols, 77
Silica, 11, 21, 29, 33, 49, 55, 59, 67, 83, 93, 121, 181
Silica clusters, 93
Silica gel, 97
Sodium dodecyl sulfate, 311
Sodium silicate, 189
Sol–gel, 163, 181
Sol–gel ceramics, 139
Sol–gel process, 173
Solubility, 33
Solvent extraction, 201
Sorption, 113
Specific surface area, 235
Spectral subtraction, 11
Spherical silica, 103
Spherosilicates, 131
Stability, 113
Surface area, 67
Surface charges, 253
Surface complexation, 259
Surface inhomogeneity, 83
Surface modification, 97
Surface potential, 301
Surface pressure, 301
Surface rearrangement, 93
Surfaces, 11
Surfactant mixtures, 49
Suspension, 209
Suspension agent, 209
Suspension polymerization, 209
Suspension stability, 209

Tetraethoxysilane, 181
Titanium tetrachloride, 11
Transference number, 253
Transmission electron microscopy, 151
Triethylamine adsorption, 97
Tube alkoxides, 139
Tube polymers, 139
Tube silicates, 139
Turbidity, 311
Tween, 329

UV absorption, 311

Vitamin E, 311

Water-in-oil microemulsions, 219

X-ray diffraction, 77

Zeolite, 39
Zeta potential, 121
